MR JAMES THOMPSON  
T & B AIR CONDITIONING SERVICES PTY LTD

I wish to advise that I have known and worked with Mr James Thompson of T&B Air Conditioning Services Pty Ltd for a period in excess of ten years.

During this time T & B Air Conditioning Services and James Thompson have worked on a number of projects, controlled by this office, some of which include:

Design, supply, delivery and installation of:

1. Purpose built air handling systems for clean rooms.
2. Building management control systems.
3. 840kW of air cooled liquid chillers.
4. Primary and secondary chilled water reticulation systems.

In all of these projects, and several others, there was considerable design input by James Thompson, in all instances the air conditioning systems were satisfactory in every respect.

In many instances the systems were non standard and required a high level of skill to achieve the required results.

It is my opinion that Mr James Thompson possesses design skills far above the average in his industry.

I am aware of several systems which Mr Thompson has designed and installed. These systems incorporate state of the art technology and have provided his clients with considerable benefits with greatly reduced operating costs and at the same time provide significant green house gas reductions.

I am confident in Mr James Thompson's mechanical services design capabilities and would be in no doubt of his ability to design air conditioning systems to capacities of several hundreds of kW(r), be they DX, chilled water, flooded, evaporative, air cooled or water cooled.

Should you require enlargement of any aspect of this reference please do not hesitate to contact me.

Yours faithfully
